

# Better Pancakes. Built to Last.

It looks the same – but inside, it's a different story.

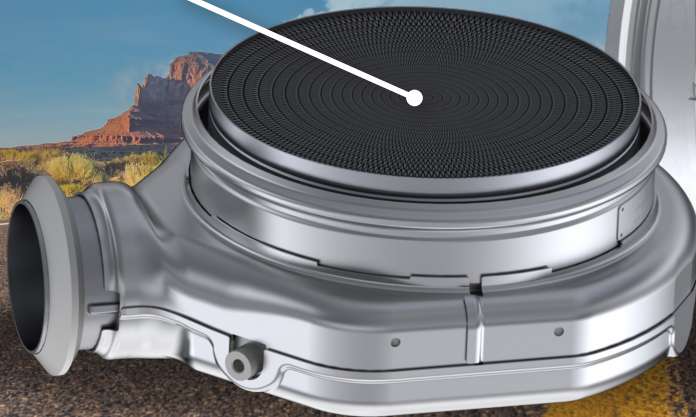

We challenged our innovative engineers to rethink DOCs for Cummins EPA17–21 Pancake systems.

The result: a simplified, more durable design with higher flow and lower thermal mass.

But the difference that truly matters? More uptime. Proven performance.

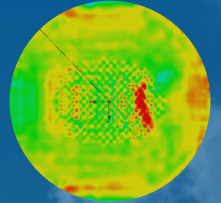

## Metallic core

Better resistance to thermal and physical stress, with lower thermal mass for faster system heat-up.

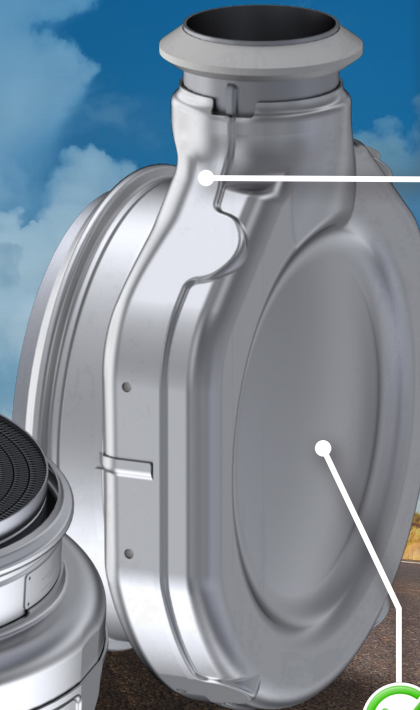

## Optimized flow rate

Let the engine breathe with less restriction – while maintaining flow uniformity.

Flow uniformity validated at index 0.943

## Simpler internal design

Fewer components for fewer failure points and less flow restriction.
